

INSTALLATION INSTRUCTIONS**Series SA-1****Water Hammer Arrestors****Installation Instructions**

Shock waves are caused by fast acting valves and can be controlled by using a shock arrestor. Use one unit for each hot and cold water line.

Series SA-1 is designed for new or existing water lines with pressures up to 150psi (10.3 bar) and temperature ranges of 33°F (0.5°C) to 180°F (82°C). Systems which exceed 60psi shall be installed with a pressure reducing valve upstream of the unit.

Select a location as close to the source of shock (i.e. dishwasher, icemaker, toilet or faucet) as possible. Allow sufficient clearance for installation.

For your safety these units are pre-charged at the factory and are not rechargeable or repairable.

Although they function in any orientation, Figure 1 and 2 show the proper installation where the shock would be absorbed most effectively.
