**Maintenance Instructions****NOTICE**

Early units of the union end ball valve shipped with a different O-ring groove dimension than the current production. Two O-rings are provided with this kit—one for each design. Select the O-ring to meet your application.

- 1) Unscrew the union connection and remove old O-ring.
- 2) Determine which new O-ring fits best in the groove.
Proper fit should be snug without extending past the outside or inside diameter of the groove. O-ring should not bind or pinch.
- 3) Apply a thin film of food grade petroleum based O-ring lubricant to the new O-ring.
- 4) Place the new ring into the groove of the union connection and screw union connection back together.
