Series 758A Screwed End "Y" Type Strainer

ES-F-710/715 0627

Flow Rate

Above based on flow of clean water through unplugged screens.
Some sizes listed on flow charts are not available from FEBCO.

Flow-coefficient

The flow coefficient (Cv) is the number of gallons per minute of water flowing through a given size restriction at a pressure drop of one psi. To obtain the Cv factor for a given size strainer, read capacity at intersection with the one (1)psi pressure drop.

Conversions: For gpm to lpm, multiply by 3.8.
For psi to bar, multiply by .069
