

Waterline Shower Channel

For Commercial and ADA Showers & Washrooms

WaterLine Shower Channel

The BLÜCHER BWC WaterLine Channel is the practical, professional choice for design and installation in commercial and ADA showers & washrooms.

Fully ADA compliant, the BWC series' thin profile enables both in-slab and above-floor construction, with a single flashing point and floor penetration. The compact linear design eliminates special design and construction accommodations, dramatically reducing installation time and labor.

Features

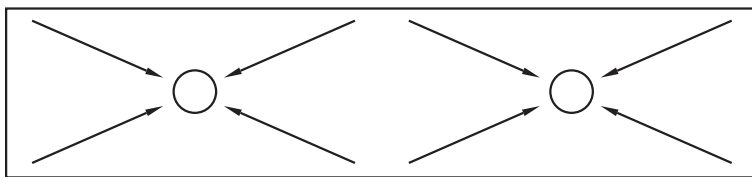

- AISI Type 304 stainless steel construction
- Thin profile
- Vertically adjustable, reversible stainless steel flashing collar
- Full tiling frame and locking grate
- Adjustable leveling tabs
- 2" (50) cast iron no hub, IPS threaded, PVC, or ABS outlet
- Custom gratings available

Benefits

- Installs above the structural floor
- Single flashing point reduces labor and potential leak areas
- Linear design accommodates wheelchair traffic
- Full frame enables proper tiling and clean, sanitary installation

WaterLine Linear Drainage

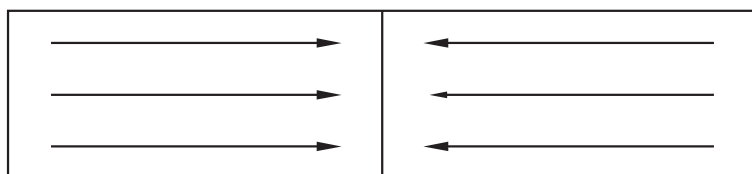

Traditional point drains require multiple floor slopes and create potential wheelchair traps. The BWC Shower Channel installs with a single slope from the wall to the channel, reducing installation time and improving accessibility.
