

# Watts Select — Water Quality Configurator

## Using the system

### Overview

The **Watts Select — Water Quality Configurator** is an online system that allows you to quickly configure and select the right products for your jobs. Once products are selected, you can generate all of the information needed to create a quote with a click. When your clients decide to purchase, the system can send a P.O. directly to Watts with all of the selected products.

### How It Works

Log in to your account at **WQSelect.Watts.com**.

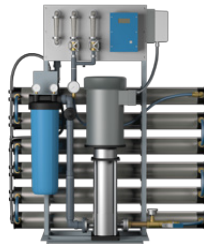

#### 1) CREATE NEW JOB

Click “Create New Job” on your Dashboard. Fill in the required details and save. Job details can also be edited later.

#### 2) ADD PRODUCTS

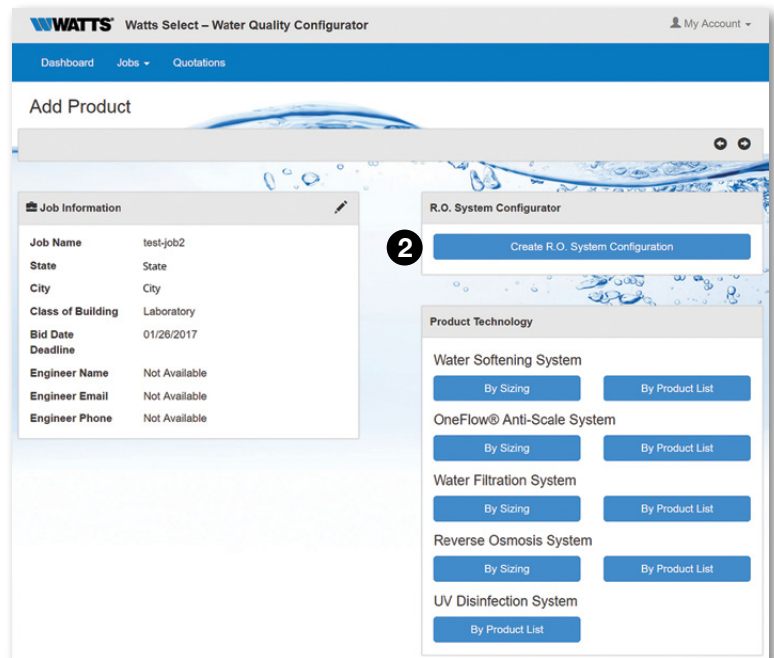

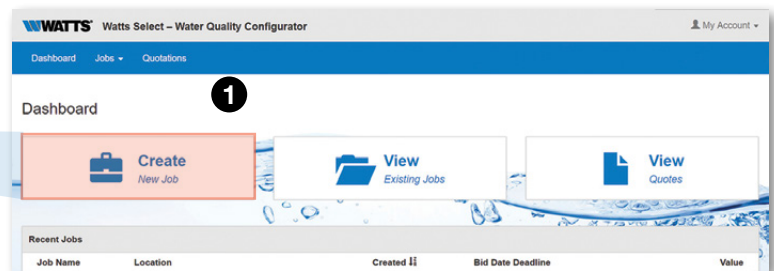

Select products by name or using the automatic sizing feature.

Use the **R.O. System Configurator** to design and size a complete train of equipment to match project needs. Once completed, the configurator displays your custom solution including a 3D visual of the assembly.

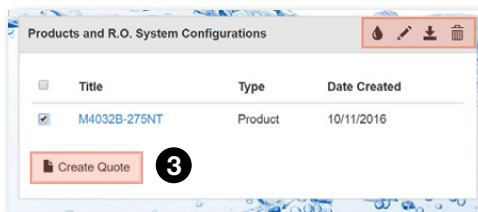

### Benefits

- **Quickly select products** to match each job
- Access saved jobs and quotes **online, anytime**
- Obtain **job specific price lists** to simplify quoting
- **Download** product specifications, sales brochures and drawings
- See what **custom RO assemblies** will look like with a 3D image

### 3) CREATE QUOTE

Once products are selected, click “Create Quote.” Product quantity can be changed or removed at any time. Quote status is automatically set to “Active” for all new quotes. The system allows you to create multiple quotes for any job. Save your quotes if you want them stored and tracked for future reference.

- Create Product or R.O. System Configuration
- Edit
- Download Literature Package
- Delete
