

# Introducing

## Governor™ 80M2 Toilet Fill Valve

An improperly functioning toilet can be a significant source of wasted water. The Governor™ 80M2 toilet fill valve is able to detect a leaking toilet flapper and prevent the tank from continuously refilling. An optional override allows the toilet to operate until the flapper is replaced.

The Governor™ 80M2 helps you conserve water. While a traditional toilet bowl often over-fills resulting in wasted water (up to 12% per flush), this unique fill valve includes an adjustable flow control device that ensures the tank will fill to the appropriate level each time.

In addition, the Governor™ 80M2's built-in surge relief feature helps limit supply line pressure, protecting your plumbing from the damaging effects of pressure surges and thermal expansion.

The Governor™ 80M2 is compact, easy to install, and requires no tools – making it your toilet fill valve of choice.

## **Stops Leaks, Saves Water, Easy to Install.**

### **Benefits:**

- Compatible with all major toilet brands
- Protects against costly pressure surges due to thermal expansion
- Conserves water - up to 12% per flush
- Prevents costly waste by shutting off water to a leaking toilet
- Compact design with simple height adjustment - can be fine-tuned after installation

# Fits All Major Brands of Toilets and Installs without Tools

The Governor™ 80M2 universal toilet fill valve, the latest version in the popular Governor 80 series, features a new leak sensor that automatically shuts off the water to a leaking flapper. The next time the toilet is flushed, no water will be released, alerting the homeowner that there is a leak. For convenience, the float lock can be disengaged so the toilet can be used until a repair is made.

The Governor™ 80M2 also has its predecessor's unique surge relief feature. The built-in surge relief protects your plumbing from costly pressure surges, thermal expansion and water hammer. This cost saving feature reduces the

need for a thermal expansion tank in line with the water heater.

In addition, the Governor™ 80M2 includes an adjustable water saving flow control which can save up to 12% of the toilet's water usage per flush. Traditional fill valves allow the toilet bowl to overfill and the excess water will exit down the trap. This water is wasted unnecessarily. The Governor™ 80M2 adjusts so that the bowl only fills to the level needed, without overfilling, conserving water and saving money.

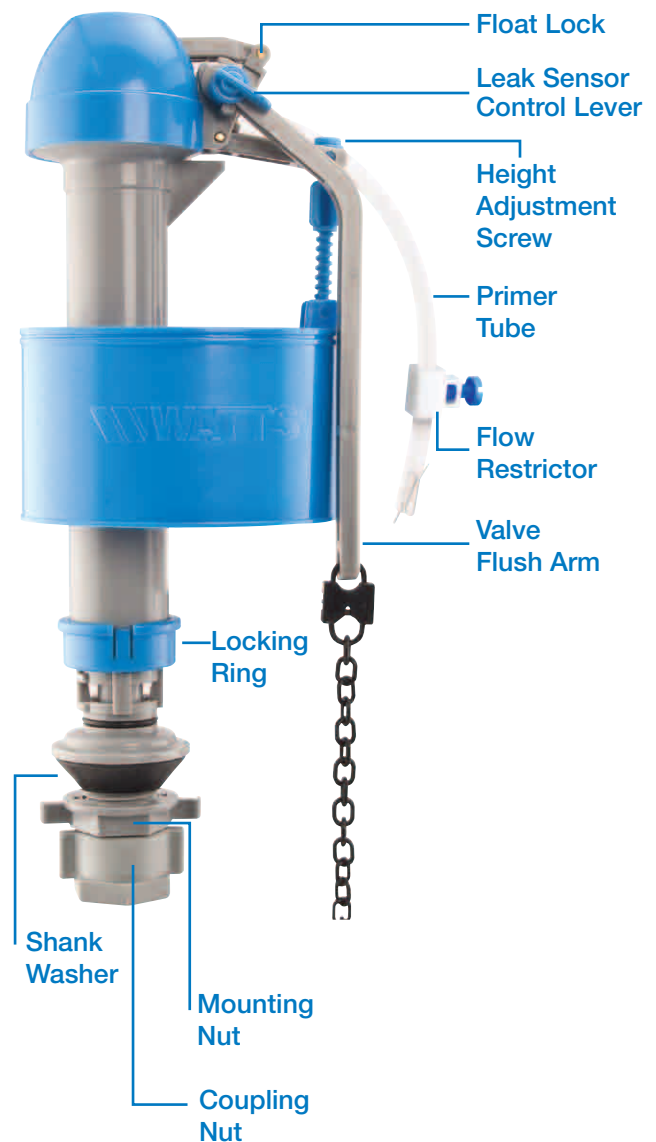

This handy replacement fill valve is easy to install (no tools required) and fits all major brands of toilets.

## Features:

- Leak sensor alerts you to a leaking flapper
- Surge release limits the supply line pressure to 80psi
- Simple installation – no tools required
- Adjustable water flow control conserves water
- Manual float lock allows toilet to be used until repair can be made
