BLÜCHER trench drains deliver right mix of style and safety

"We used BLÜCHER trench drain for the first time at the UWM Camp Randall Stadium. It was easy to work with and looks good. We'll be using it again."

*- Brian Schultz,
Project Manager at
Hooper Corporation.*

CUSTOMER: University of Wisconsin-Madison

SCOPE: The summer of 2012 saw feverishly-paced construction work at the University of Wisconsin Student Athlete Performance Center at Madison's Camp Randall Stadium.

CHALLENGE: Large showers in the locker rooms needed a robust, sanitary drainage system that could handle a high flow rate.

SOLUTION: Hooper Corporation installed BLÜCHER stainless steel trench drain for optimal durability and sanitation.

RESULTS: Following installation of the drainage system, there have been no problems and no maintenance needs.

When the University of Wisconsin-Madison Badgers needed a new athletic facility, it got all the best trim, right down to the stainless steel trench drain that serves the locker room showers.

The installer - Hooper Corporation's Mechanical Division - needed product quickly because of the tight construction schedule. Gerard Goglia, at Process & Mechanical Systems, Inc. worked with Shaun Opsahl at wholesaler First Supply Madison and Hooper Corporation to assure the project ran smoothly after the drain order was placed.

The locker rooms use 375 lineal feet of BLÜCHER BT6-FC-SH 6" wide trench drain. The drain is pre-sloped, with shower-style grating. Installation went smoothly, and easily kept pace with the construction schedule. The stainless steel drainage system is built to last, finding an ideal "fit" with the modern locker rooms.
