

Watts Radiant introduces FlexPlate,TM a revolutionary *NEW* under floor heating plate.

Full Text

Watts Radiant introduces FlexPlate, a revolutionary new type of under floor heating plate. The primary material in the plate is a specially processed natural graphite giving FlexPlate unique heat conduction properties. Extensive performance testing indicates FlexPlate will outperform the industry standard aluminum plates. This increase in performance maximizes the thermal efficiency of any under floor radiant system through the use of lower input water temperatures. In some cases FlexPlate will permit the use of lower temperature sources such as modulating-condensing boilers, ground-source heat pumps and solar thermal. FlexPlate is light weight, flexible, easy to cut to length, and features a simple staple-up installation. For more information regarding this or other Watts Radiant products, please visit our website at www.wattsradiant.com or call 800-276-2419.
